

SHERJEEL BIN AAMIR

DATA SCIENTIST | DATA ENGINEER | IT & PRODUCT MANAGER

Islamabad, Pakistan | +92 321 513 7445 | sherjeelbinaamir@gmail.com | linkedin.com/in/binaamir93

PROFESSIONAL SUMMARY

Data scientist and data engineer with 14+ years of experience, including 11 years as Manager IT at the Strategic Plans Division (SPD), Pakistan, and an MS in Data Science (Maryville University, USA, 4.0 GPA). Combines IT, data center, and data management leadership with applied machine learning (XGBoost, LightGBM, PyTorch, ARIMA, NLP) and hands-on GCP data engineering (BigQuery, Cloud Functions, medallion ETL/ELT) and executive BI. Proven at turning messy operational data into forecasts, KPIs, and decision-ready dashboards, and at translating business problems into technical delivery.

CORE SKILLS

- **Data Science & ML:** Python, Pandas, NumPy, Scikit-learn, XGBoost, LightGBM, PyTorch, ARIMA/time-series forecasting, NLP sentiment analysis, feature engineering, EDA, Seaborn
- **Data Engineering:** GCP (BigQuery, Cloud Functions, Cloud Storage, Pub/Sub, Vertex AI), ETL/ELT, Medallion (Bronze/Silver/Gold) architecture, SQL, Oracle PL/SQL, REST APIs, webhooks
- **BI & Visualization:** Power BI, Tableau, Looker Studio, KPI & unit-economics dashboards (LTV, CAC, churn)
- **Delivery & Tools:** Agile/Scrum, PRDs, Jira, Make.com, Zapier, HubSpot, GoHighLevel, Zoho, Selenium

PROFESSIONAL EXPERIENCE

Product Manager (Data, Analytics & CRM) | PosiTrace, Canada (Remote) | Jan 2023 – Present

Data & Product Leadership

- Serve as data lead and product owner for telemetry, CRM, and internal operational platforms; define the long-term product vision, roadmap, and release priorities.
- Translate executive and business requirements into detailed PRDs, functional specifications, user stories, and prioritized Agile backlogs in Jira.
- Define data requirements, KPIs, and reporting needs; ensure data quality, consistency, and reliable analytics across teams and systems.

Data Engineering & Data Science

- Design serverless GCP data pipelines using BigQuery and Cloud Functions with Medallion (Bronze/Silver/Gold) architecture, turning raw telemetry into analytics-ready models.
- Conduct exploratory data analysis and time-series modeling in Python (Pandas, Scikit-learn) to evaluate churn risk, driver behavior, and usage patterns.
- Engineer features from telemetry data (usage frequency, trip and driving patterns, account activity) to support churn-risk scoring and customer segmentation.
- Apply forecasting and trend analysis to usage and subscription data to support capacity, retention, and revenue planning.
- Analyze driver-behavior signals to identify patterns and anomalies, and turn the findings into product requirements and dashboard insights.
- Build executive BI dashboards in Looker Studio and Power BI to monitor SaaS metrics including LTV, CAC, MRR, and retention.

Team & Stakeholder Management

- Lead cross-functional teams of engineers, data analysts, and system administrators through sprint planning, daily stand-ups, and release cycles.
- Coordinate daily with executives, sales, operations, support, and engineering across time zones; run user research, UAT sessions, and feedback loops.

Key Initiatives

- Led the Zoho-to-HubSpot CRM migration with 100% data integrity, including custom object schemas, lifecycle stages, automated lead scoring, and deal pipelines.
- Engineered ZoomInfo REST API integrations to enrich customer profiles and trigger automated sales workflows.
- Launched a real-time fleet dispatching module, including driver-assignment algorithms, from concept to release.

Manager IT | Strategic Plans Division (SPD), Pakistan | Jan 2013 – Dec 2023

Eleven-year progression from engineer to Manager IT, with end-to-end responsibility for the division's IT systems, infrastructure, and data.

IT Management & Strategy

- Planned and managed the division's IT strategy, annual budgets, and technology roadmap in line with organizational priorities.
- Defined IT policies, standard operating procedures, and service-level expectations; managed IT projects from requirements through deployment and support.
- Led and mentored IT staff, assigned tasks, and coordinated with user departments, management, and external vendors.

Hardware & Infrastructure Management

- Managed the lifecycle of servers, workstations, networking equipment, and peripherals: specification, procurement, installation, maintenance, and replacement.
- Maintained hardware inventory and asset records; ensured system availability, preventive maintenance, and timely fault resolution.

Software & Application Management

- Owned the product backlog for multi-module enterprise ERP systems covering HR, Procurement, and Finance; managed requirements, customization, testing, and releases.
- Managed Oracle 10g ERP customization and software licensing, upgrades, patching, and user support.

Data Center Management

- Oversaw day-to-day data center operations, including servers, storage, backup and recovery, monitoring, and capacity planning.
- Ensured uptime, business continuity, and disaster-recovery readiness for critical systems.

Data Management & Analytics

- Engineered Oracle PL/SQL data pipelines and designed cross-platform database links for live reporting, improving core system processing speed by 15%.
- Built Python/Selenium automated crawlers for external data collection, increasing data ingestion efficiency by 30%.
- Conducted exploratory data analysis on HR and workforce metrics using Pandas and Seaborn, improving executive decision-making accuracy by 25%.
- Implemented executive KPI dashboards that cut manual procurement tracking by 20%.

Security, Compliance & Vendor Management

- Enforced data security, access control, and information-handling practices appropriate to a sensitive government environment.
- Managed vendor relationships, tenders, and service contracts; evaluated solutions and supervised outsourced implementations.

Software Engineer | Techlogix, Pakistan | Jan 2012 – Dec 2012

- Supported deployment of Oracle-based enterprise banking software for Askari Bank.
- Refined complex SQL scripts with reporting teams, improving query performance and system accuracy by 20%.
- Authored technical test plans, reviewed architectural documentation, and provided on-site deployment and UAT support.

DATA SCIENCE PROJECTS

- **Forest Cover Classification (Python):** LightGBM and XGBoost models with feature engineering, achieving 90% accuracy.
- **Indoor Scene Classification (Computer Vision):** PyTorch ResNet18 network achieving 79.41% accuracy on 15,000+ images.
- **GCP Lead-to-Fulfillment Pipeline:** event-driven Cloud Functions + Make.com pipeline syncing GHL leads, Stripe payments, and Slack alerts.

EDUCATION

M.S. Data Science — Maryville University of Saint Louis, USA 2025 | GPA 4.0/4.0

M.S. Computer Software Engineering — NUST, Pakistan 2016 | GPA 3.55/4.0

B.E. Computer Engineering — NUST, Pakistan 2011 | GPA 3.33/4.0
